**Subject:** Offer to make a presentation

Bastiaan Lammers of Stuyvesant Environmental Contracting was at the last CAG meeting and offered to make a presentation to the CAG on work that his team is doing in contaminated sediment remediation around the world.

His company built and operates the sediment processing facility at the Fox River and has a contract with Tierra Solutions to build a sediment processing facility for the 40,000 cubic yard Passaic River Removal. He said that he could make a presentation on the Fox River project and on other projects his company is doing around the world (focusing on Europe). Note that there is no sediment decontamination technology being implemented at Fox River, just sand separation and beneficial reuse.

My initial reaction was that the CAG doesn't need yet another vendor presentation, particularly since it is not a new decontamination technology. However, Jennifer Samson was there when I talked to Mr. Lammers and she expressed interest in hearing him talk about the projects from around the world. So, if you would be interested in having him make a presentation at a future CAG meeting, please let me know and I can make arrangements with him. Please also let me know what particular aspects you would like to hear about from him.

I also wanted to let you know that I will not be able to attend the April and June CAG meetings, because of child care issues. I will make sure that someone else from EPA attends in my place who will be able to discuss Lower 8 Mile Action issues, if they are on the agenda for those meetings.
